The Guy Harvey Research Institute

Using Science to Conserve Our Ocean's Fishes

The Guy Harvey Research Institute (GHRI) is one of the nation's premier conservation research organizations committed to finding science-based solutions to stopping the alarming declines in the world's fish resources and biodiversity.

The GHRI was formed in 2000 as a collaboration between renowned artist/marine conservationist Guy Harvey, Ph.D., and the Oceanographic Center at Nova Southeastern University in Florida. We are dedicated to conducting high-quality scientific research and providing the education that is essential for implementing successful conservation and management measures for our ocean's fishes.

We invite you to find out more about us, our world-class research on open ocean and coral reef fishes, and our conservation accomplishments at www.nova.edu/ocean/ghri/. We need your vital support of these important research activities to save our oceans.

For more information on the conservation research and ways to support these activities, please contact us at (954) 262-3600 or by email at ghri@mail.ocean.nova.edu.
