NSUWorks Citation

This Article is brought to you for free and open access by the Department of Marine and Environmental Sciences at NSUWorks. It has been accepted for inclusion in Marine & Environmental Sciences Faculty Reports by an authorized administrator of NSUWorks. For more information, please contact nsuworks@nova.edu.
Artist Joanne Schinbeckler's rendering of the Navy Remote Ocean Sensing System (NROSS) satellite, which is expected to be launched in 1988. Onboard will be a 6-antenna scatterometer that will provide sea surface wind velocity measurements. The original drawing was provided by NASA.

This document was produced under NASA Contract Number NAS5-26714.

Published by the Nova University/NYIT Press, Fort Lauderdale, Florida, July 1984.
FOREWORD

This bibliography was compiled as an outgrowth of the Satellite Surface Stress (S3) Working Group, which was sponsored by NASA/Goddard Space Flight Center and NASA/Jet Propulsion Laboratory (JPL) from the fall of 1982 to the spring of 1984 (Contracts NAS5-26714 and 956773). I wish to thank the Working Group Chairman, Dr. James J. O'Brien, for providing me with the impetus to compile this work. I also wish to thank the other members of the Working Group for adding their moral support (as well as many of the references).
