My Path to Medicine
Presenter: Dr. Inaki Bent, D.O., M.B.A., M.S.
Associate Physician at Unihealth of South Florida, Inc.
Carmel Barrau, M.D. and Associates
IBent@med.miami.edu

Dr. Bent is a Miami native who has worked in Primary Care since 2013. He received his Bachelor of Science degree from Florida State University and a Master of Biomedical Science from Barry University. He went on to Nova Southeastern University and received a Doctorate of Osteopathic Medicine and a Master of Business Administration degree in 2010. He completed his residency training in Internal Medicine at Jackson Memorial Hospital-University of Miami Miller School of Medicine.

After completing residency, Dr. Bent joined Unihealth of South Florida-Carmel Barrau, M.D and Associates as an Associate Physician in Internal Medicine. He is a member of the Association of Haitian Physicians Abroad-South Florida Chapter, Florida Osteopathic Medical Association, the James W. Bridges Medical Society, and the American Osteopathic Association.

Dr. Bent’s personal interests include mentoring, community organizing, motivational speaking, and medical outreach. His medical interests include nephrology, HIV/AIDS, correctional medicine, and medical education. Dr. Bent is married with three children.

My Journey to Becoming a Dentist
Presenter: Zuhdiyah M. Darojat, DMD
Farquhar College Graduate, 2006
Doctor of Medical Dentistry, 2010, University of Florida College of Dentistry
Associate General Dentist, Sage Dental of Plantation, FL
zuhdiyahd@me.com

As a practicing general dentist and pretty recent graduate, I understand that GPAs and test scores are important, but are definitely not defining factors in being a good dentist, especially clinically. I know firsthand because I was one of those students. Without the perfect grades and test scores, one may think that getting accepted into dental school and becoming a dentist is impossible, but the opposite is true. In my opinion, a successful dentist is measured by qualities including good communication and technical abilities, humility, passion, decisiveness, understanding, care, persistence, and the pursuit of excellence.

My goal is to share my journey from undergrad through dental school and now as a dentist in private practice. With less than a 4.0 GPA and an average DAT score, I will discuss the achievements I accomplished while in undergrad that helped strengthen myself as a dental school applicant. I will also discuss my life and the obstacles I overcame as a UF dental student and as a practicing dentist in South Florida.

Freshman at Farquhar to Pharmacy Professor: The Reality of the Journey and Tips for Success
Presenter: Nicholas Carris, Pharm.D., BCPS
Farquhar College Graduate, 2008
Pharm.D., University of Florida, 2012
Assistant Professor, Department of Pharmacotherapeutics and Clinical Research, Department of Family Medicine
Colleges of Medicine and Pharmacy, University of South Florida, Tampa, Florida
carris@health.usf.edu

The path to becoming a healthcare provider is a commitment to lifelong learning, constant hard work, and a career that is not about you. Every class you take, everything you learn, every experience you engage in is preparing you to be a competent and compassionate healthcare provider, so that one day you can walk into the room of a desperate patient and help them. The pay is average at best, especially considering the years of training. People will be angry at you when you are doing your best to help them. People will be angry when you do not want to work for free, and you can expect to burn out if you are doing it for the money. However, if you truly want this for whatever your one or many reasons are; it is worth it every day.

For those of you who want to pursue this I will be happy to call you a colleague one day.

Tips for success:
1. Know what experiences you cannot get back
   You can work and make money later.
   You only get one chance to make a good grade in General Chemistry 1.
2. Be focused but flexible
   If interested in pharmacy – pursue it!
   Take all prerequisites to qualify for medical, dental, PA, etc. programs as well
3. Exercise reduces stress
   The less time you have for it, the more you need it
4. Be social and stay in touch with your classmates
   They’ll be doctors one day too
Entrepreneurship at Nova Southeastern University.

Leadership at the H. Wayne Huizenga School of Business and earned a Masters in Business Management with emphasis on Optometry from the University of Houston. In 1993, he graduated from Schreiner University and a Bachelor of Science degree in Optometry.

Dr. Michael Bacigalupi grew up in Fort Lauderdale, Florida. His father was a letter carrier for the US Postal Service and his mother was an office manager for a local optometrist. I began shadowing my now supervising physician in 2004. At the time, he had a physician assistant working with him, so I had the opportunity to observe their interaction, learn dermatologic terminology and procedures, and strengthen my interpersonal communication skills. I knew I could see myself as an integral part of the patient’s care and was determined to become a physician assistant.

Once accepted as a dual admission student, my undergraduate journey began. I had a rigorous schedule for three years which included required science courses and honors program seminars. I was on the executive board of pre-medical clubs and was a peer tutor at Academic Services. It was crucial to have an organized and strict schedule, which I feel helped prepare me well for the challenging and intense coursework in PA school. Being a PA student taught me to persevere and gave me confidence to apply my knowledge when diagnosing and treating patients. I have been practicing as a physician assistant for over six years and still learn new things each day; about medicine, those I take care of, and myself. It’s about working as a team to comfort patients, eduate patients, and save lives.

Dr. Bacigalupi was in private optometric practice for 12 years. He is licensed as an Optometric Glaucoma Specialist in Texas. His private practice focused primarily on ocular disease and glaucoma care. He served on the Board of Directors of the Texas Optometric Association (TOA) and was honored as the Texas Young Optometrist of the Year in 2003. Dr. Bacigalupi is a Fellow of the American Academy of Optometry and is a clinical examiner for the National Board of Examiners in Optometry. He has been honored by Lions Club International with the International Service Award for his many eye care mission trips into Central America.

Dr. Bacigalupi was appointed Assistant Dean for Student Affairs of the College of Optometry in 2008. He is a lecturer for the 4th practice management course entitled “Current Topics in Practice Management” and lab instructor for “Optometric Theory and Methods.” Dr. Bacigalupi is a frequent author and lecturer in the areas of practice management, student affairs, and admissions.

Prior to joining the faculty of Nova Southeastern University, Dr. Bacigalupi was in private optometric practice for 12 years. He is licensed as an Optometric Glaucoma Specialist in Texas. His private practice focused primarily on ocular disease and glaucoma care. He served on the Board of Directors of the Texas Optometric Association (TOA) and was honored as the Texas Young Optometrist of the Year in 2003. Dr. Bacigalupi is a Fellow of the American Academy of Optometry and is a clinical examiner for the National Board of Examiners in Optometry. He has been honored by Lions Club International with the International Service Award for his many eye care mission trips into Central America.

He is a lecturer for the 4th practice management course entitled “Current Topics in Practice Management” and lab instructor for “Optometric Theory and Methods.” Dr. Bacigalupi is a frequent author and lecturer in the areas of practice management, student affairs, and admissions.

I was introduced to the Physician Assistant profession as a high school sophomore during a pre-medical program. I always desired to be in the medical field as I enjoyed science, problem solving, and interacting with others. I decided to learn more about what a PA does and if I could see myself becoming one. I began shadowing my now supervising physician in 2004. At the time, he had a physician assistant working with him, so I had the opportunity to observe their interaction, learn dermatologic terminology and procedures, and strengthen my interpersonal communication skills. I knew I could see myself as an integral part of the patient’s care and was determined to become a physician assistant.

Once accepted as a dual admission student, my undergraduate journey began. I had a rigorous schedule for three years which included required science courses and honors program seminars. I was on the executive board of pre-medical clubs and was a peer tutor at Academic Services. It was crucial to have an organized and strict schedule, which I feel helped prepare me well for the challenging and intense coursework in PA school. Being a PA student taught me to persevere and gave me confidence to apply my knowledge when diagnosing and treating patients. I have been practicing as a physician assistant for over six years and still learn new things each day; about medicine, those I take care of, and myself. It’s about working as a team to comfort patients, eduate patients, and save lives.

Grad School gave me the opportunity to have involvement with different community health initiatives in Baptist Congregational Health, UM Docs Program, and as well as Miami-Dade Area Health Education Center. Through these experiences a disturbing trend was becoming apparent. A lack of meaningful intervention.

I currently work as a Research Associate on several different research projects at the Center on Aging within the Department of Psychiatry. My busiest project is the Alzheimer’s Disease/Dementia study for Caregivers. In this project, we are trying to determine if by using computer tablets and other technology to deliver this intervention whether Caregivers can learn the skills and knowledge of being a better caregiver. This could help millions of families improve their quality of life as they care for someone with these diseases.

Public Health opened a world for me that I never knew existed. Before my time on these research projects there were moments where I wondered whether I made the right choice. Looking at the future, I can see myself eventually growing into a role where I could be a Principal Investigator and Author on a research grant proposal and project. What is most important is that with hard work and vision I have been able to find this road, and I hope many other students will find their own road.

My Journey to Optometry How Chiropractic changed my life:
My journey from Business owner to Chiropractor
Advice to my future colleagues
Presenter: Hector L. Andino Rivera II, DC
B.B.A Human Resource Management; Interamerican University of Puerto Rico; 2010
M.S. Sports Health Science Life University; 2016
D.C. Life University; 2016
Chiropractic Physician, Chiropractic USA of Plantation, handino@chiropracticusafl.com
Life University Masters Honors Graduate 2016
Life University College of Chiropractic Graduate 2016
Practicing Chiropractic Physician in Broward County, FL handino@chiropracticusafl.com
Raised in a family of doctors, I never had the idea of becoming one. When I started undergraduate school in Puerto Rico, I studied business administration because I wanted to be my own boss and that was my focus. I achieved that degree in 5 years and by my 4th year I had my own business. After working in retail for 14+ and being in business for 6+ years, I visited Life University and that forever changed my life. I decided to go to chiropractic school and with that came many challenges, but that adjustment I received and the response I got from patient when I adjusted them is what reminded me why I choose this profession. My experience working with patients and athletes everyday, and seeing their response after the adjustment is what I love about being a Chiropractor.

I will speak about my transition from business owner to chiropractic student to practicing chiropractic in the real world, out of the school bubble. Chiropractic is a field that is growing all over the world and faces many challenges besides the fact it provides great benefits. It requires not only mental but physical and also precise technical expertise, but you can make a difference everyday in people's lives just by giving patients a scientific, specific adjustment that corrects vertebral subluxations which allows the person's body the ability to communicate better and restore proper function in the nervous system.

12:10- 12:30 p.m.

Inspiration Makes Your Dreams A Reality
Presenter: Betsy Kreymer, PT, DPT, ATC
Doctor of Physical Therapy, Nova Southeastern University 2016
Bachelors of Science in Athletic Training, Nova Southeastern University 2012
Physical Therapist, Sports Medicine Associates of South Florida, FL
kreymer@nova.edu

Ask yourself, “Why do you want to be a physical therapist?”
That's your inspiration!

I knew I wanted to be a physical therapist when I was treated for an ankle injury sustained from competitive gymnastics in rural England. I was 11 years old. Making that dream a reality included moving around the globe before landing (and sticking!) a cheerleading scholarship to Nova Southeastern University.

I graduated as president of the Athletic Training Students’ Organization and with a lot of hands-on experience.

I continued on at NSU in the DPT program during which I was elected vice president of my class. I found the opportunities here were amazing. I became a medical illustrator for published articles and textbooks. Those three years were the most intense, stress-inducing, and exciting of my life. You don not appreciate how great, but grueling, the program truly is until you are in the classroom, the clinicals, or the study groups. My inspiration (and a lot of caffeine) kept me going forward.

Now that I am a practicing physical therapist, I don not have the words to express how “worth it” it all was- I am now on the other side of the table from that 11 year old. I am still motivated, excited, and challenged every day.
Nova Southeastern University
Career Development

Hours of Operation
Horvitz Office (1st Floor of the Horvitz Building, Room 152)
Mon.–Fri.  8:30 a.m.–5:00 p.m.
