Nova University News, July 1976

Nova University
University to Confer 800 Degrees

Nova University Named Recipient of Goodwin Untrust

The university will allocate a portion of its educational resources to the Leo Goodwin, Sr. Untrust for continued development of a new building for its Law School, university trustees have confirmed.

The university has announced that it will allocate the Leo Goodwin, Sr. Law Building contingent upon the receipt of sufficient funds from the Untrust.

The Law Goodwin Building will be constructed on a five-acre tract adjacent to and west of the present campus, Board of Trustees Chairman M. R. Young announced. This property is part of a 50-acre tract being donated to the university by Davie resident Earl Velte, a long-time supporter of the institution.

The tract being donated to the university by Earl Velte, a long-time supporter of the institution, Tentative plans call for a Law School building of approximately 60,000 square feet. Construction costs have not been estimated.

Granted provisional accreditation by the American Bar Association in its first year, the Center for the Law School's third-year class will be graduated in June 1977. The Center for the Law School's third-year class will be graduated in June 1977.

The newly-proclaimed candidate for New York State Senate, Congresswoman Bella S. Abzug, addressed the college's largest graduating class to date. Over 800 people attended the exercises at which NYT President Dr. Alexander Schure conferred approximately 120 undergraduate and graduate degrees on candidates from the Metropolitan College, Old Westbury Campus, Commack College Center, and satellite learning centers such as Eastern Airlines head quarters in Miami and Ft. Monmouth in New Jersey.

Police personnel completing degree requirements in a special criminal justice program were also awarded baccalaureate diplomas. Master's degrees in communications and behavioral sciences were conferred for the first time. Major fields of study included architecture, fine arts, communications, business, education, the humanities, science and technology.

(YNT Graduates 1200)

More than 1200 students received degrees June 15 at the 16th annual commencement exercises of the New York Institute of Technology, at the Old Westbury, Long Island campus.

The newly-proclaimed candidate for New York State Senate, Congresswoman Bella S. Abzug, addressed the college's largest graduating class to date. Over 800 people attended the exercises at which NYT President Dr. Alexander Schure conferred approximately 120 undergraduate and graduate degrees on candidates from the Metropolitan College, Old Westbury Campus, Commack College Center, and satellite learning centers such as Eastern Airlines head quarters in Miami and Ft. Monmouth in New Jersey.

Police personnel completing degree requirements in a special criminal justice program were also awarded baccalaureate diplomas. Louis W. Parker Receives Higher Education Award

Louis W. Parker, Fort Lauderdale inventor, industrialist and philanthropist, is recipient of a Champion of Higher Education Award (C.H.E.A.) award. The presentation was made at an award banquet May 27 at Bahia Mar Hotel.

In presenting the award to Dr. Parker, whose million dollar gift in 1966 helped launch the University, Dr. Abraham S. Fischer, president, cited not only Dr. Parker's contributions to Nova but to the world, as an inventor, and to south Florida, for his enhancement of theatre arts.

Others honored were Dr. Edward B. Bloomer, for her support of Palm Beach Atlantic College; Miss Vivian Decker, Barry College; Joseph M. Pitts, Jr., Biscayne College; Max Orlov, University of Miami; John E. Price, Stonestown University; H. Earl Smalley, St. Leo College, and Charles F. West, Florida Institute of Technology.

Fort Lauderdale Mayor E. Clay Shaw, Jr., an alumnus of Stonestreet, read his official proclamation of May 27th as Independent Higher Education Day in Fort Lauderdale.

Dr. Parker's love for education has manifested itself in two outstanding endowments — the Louis W. Parker Physical Sciences Building at Nova University, and the Parker Playhouse in Holiday Park, Fort Lauderdale, Dr. Fischer pointed out.

In 1966 Dr. Parker asserted his faith in the then fledging Nova University by donating one million dollars for a Physical Sciences Building, thereby launching the campus on the South

More than 800 degrees will be conferred Sunday afternoon, August 1st, at 3 o'clock, at the seventh annual commencement exercises of Nova University.

Because of the size of this year's graduation, the exercises will be moved from Parker Playhouse to the War Memorial Auditorium. Over 2,500 people are expected to attend.

Dr. Elmer B. Staats, Commissioner General of the United States, will deliver the commencement address.

"We are especially pleased to have Dr. Staats as our guest speaker," Dr. Fisher said. "This will mark the occasion of our first graduate in the area of Public Administration."

The newly-proclaimed candidate for New York State Senate, Congresswoman Bella S. Abzug, addressed the college's largest graduating class to date. Over 800 people attended the exercises at which NYT President Dr. Alexander Schure conferred approximately 120 undergraduate and graduate degrees on candidates from the Metropolitan College, Old Westbury Campus, Commack College Center, and satellite learning centers such as Eastern Airlines head quarters in Miami and Ft. Monmouth in New Jersey.

Police personnel completing degree requirements in a special criminal justice program were also awarded baccalaureate diplomas. Master's degrees in communications and behavioral sciences were conferred for the first time. Major fields of study included architecture, fine arts, communications, business, education, the humanities, science and technology.

W. Tinsley Ellis, a prominent Hollywood attorney and member of a pioneer Broward County family, has served as a trustee since Nova's inception and has provided the University with substantial legal help. He was, in fact, one of the group of civic leaders and educators who conceived the idea for the institution and created its predecessor, the Broward County Institute of Technology. Currently he is also serving as chairman of the Board of Governors of the Center for the Study of Law.

Ellis was born in Fort Lauderdale, even though his parents were residing in Hollywood. "At that time, Hollywood was too small to have a hospital," he recalls. He is the son of Mrs. T. D. Ellis and the late attorney T. D. Ellis, a community leader in his own time.

The elder Ellis came to Broward County from Macon, Ga., in 1925, and the following year he drew up the charter for the City of Hollywood. He was the first attorney and member of a pioneer family, the University with charters for the Hollywood Kiwanis Club, the First Methodist Church, the Hollywood Biltmore, and the Lauderdale Yacht Club. Associated with the law firm of Ellis, Spencer, Butler and Kinlan, he has served as president of the Hollywood Bar Association and on the Executive Committee of the Broward County Bar Association. He is also a member of the Florida Bar Association.

He is married to the former Sonia Blakes.

W. Tinsley Ellis

By September we expect to have an Alumni Council established and its purposes defined. We want to sustain the enthusiasm of our graduates who are serving as agents of change in their special fields. We hope to find a way to serve as catalysts to assure that each continues to use his or her skills for effective change in education and the community.

Almost all of the degrees will be offered at Nova University, and those who are already employed in their chosen fields. By designing programs for those in leadership, it is our goal to increase individual productivity rather than add to the unemployed in the job market and through our alumni, to help the institutions in which they function.

To our P.H.D.'s, we look forward to receiving your research publications; and to our Masters Degree holders, continue to utilize your newly acquired skills. It is easy to regress to the mean. My compliments and best wishes to all who have earned their degrees with us.

I urge you to keep in touch so we can continue to ascertain how well our programs are fulfilling our goals.
Sound Wave Body Scanner Developed by Dr. William Glenn

A device using sound waves instead of X-ray for examination of internal organs of the body, developed in its final stages at the university, is virtually ready for commercial production, according to the inventor, Dr. William E. Glenn.

Demonstrating the equipment for an audience of doctors and hospital administrators at the University, Glenn said that three "handmade" units already are in use in a Cincinnati hospital which participated in the development project.

One of the initial patents on the product has just been issued.

The device employs a handheld "scanner," about the size of a household hair-drying machine, to examine internal organs and project images on a television screen.

The images appear like a moving picture. This instantaneous or "real-time" factor is one that distinguishes the device superior to others now in use, Dr. Glenn explained. No time is lost in waiting for a photograph to be developed.

The device also can show smaller bits of tissue in more detail than X-rays or other scanners, the inventor said. Thus it promises to be valuable in detecting early tumors and the early build-up of tissue that could block blood vessels.

One of its principal uses, according to Dr. Glenn, is expected to be in the detection of arterial blockage in the carotid artery of the neck, where most strokes of paralysis originate.

Dr. Glenn formerly was a research director at CBS Laboratories, operated by the radio-television conglomerate in Stamford, Conn. He was brought to Nova by the university's sister institution, the New York Institute of Technology, to complete work on several products and processes which he had started at CBS.

Cancer Auxiliary Meets at Institute

Plans are in progress for the 1977 Broadcast Foundation campaign of the American Cancer Society, following a meeting of the local Auxiliary at University's Leo Goodwin Institute for Cancer Research.

The event to be planned was a kick-off cocktail party in early March at the Twin Club in Fort Lauderdale, according to Dr. Mr. and Mrs. Herbert H. Hayes and Mr. and Mrs. Chester J. Maxson as co-chairs.

Mrs. Jan R. McCurdy is the new president of the Auxiliary Mrs. Glenn. Hochstrasser is vice president; Mrs. Raymond Garrison, secretary; Mrs. Irwin Pittman, corrrector; Mr. and memorial fund chairman, and Mrs. F. Hargis, treasurer.

Dr. Joel Warren, director of the Goodwin Institute, spoke at the Auxiliary meeting, discussing "Cancer in the Year 2000."

New York Institute of Technology, with campuses in Old Westbury, Commack and New York City, recently acquired an award of $82,000 from the National Science Foundation in Washington, D.C., for the express purpose of studying and implementing ultrasonic techniques for the improvement of non-invasive ultrasonic medical diagnoses.

These techniques are applicable in imaging the human body, in the location and detection of disease in a manner quite similar to that of the X-ray. Dr. Schure explained.

"Ultra-sound imaging, moreover, has the added benefit of being completely harmless, and it provides much clearer images of muscles and other tissues inside the body.

"It also provides moving pictures, which have opened new diagnostic procedures in obstetrics, paralytic stroke and cardio-vascular diseases."

Dr. Schure said he and Dr. Glenn "anticipate the day when improved equipment of this kind becomes as valuable and commonplace as the physician's stethoscope."

"It should be just as easy to see various organs in motion inside the body as it is to listen to their sounds."

Dr. Schure, one of the principal founders of NYIT, is an authority on electronics and therefore "especially appreciative of the potential of ultra-sonic imaging," said Dr. Abraham Fischer, president of Nova.

Scientific Center To Have New Buildings

Important progress is being made on the grounds of the Oceanographic Laboratory, with a 10,000-square-foot building under construction for housing the work of the Scientific and Technical Center.

The new building is scheduled for completion in the fall. Currently the Center's activities are housed in the trailers on the site and in a small building originally constructed for storage. At the Center work in television and sonic scanners for the medical profession is being done by Dr. William H. Glenn and his staff.

Dr. Glenn and the staff are perfecting a new type of "giant screen" television, with a smaller receiver, designed to cost substantially less than those presently on the market. They also are in the final stages of development of a series of scanners that use sonic waves rather than X-ray for making medical diagnoses.

Dr. Glenn also is exploring several applications for solar energy, and this work will be expedited with the completion of the new laboratory.

The building will house a library, offices and conference rooms in addition to the laboratory.

NYIT Receives NSF Grant For Ultrasonic Research

New York Institute of Technology, with campuses in Old Westbury, Commack and New York City, recently acquired an award of $82,000 from the National Science Foundation in Washington, D.C., for the express purpose of studying and implementing ultrasonic techniques for the improvement of non-invasive ultrasonic medical diagnoses.

These techniques are applicable in imaging the human body, in the location and detection of disease in a manner quite similar to that of the X-ray.

Dr. Schure, one of the principal founders of NYIT, is an authority on electronics and therefore "especially appreciative of the potential of ultra-sonic imaging," said Dr. Abraham Fischer, president of Nova.
First Year Student Tops Law School Dean's List

Karen Curtis, Robert Dunckel and William Taylor head the first semester dean's list at Nova University Law School with averages (out of a possible 4.0) of 3.89, 3.86 and 3.75, respectively. Ms. Curtis is a first year student, Dunckel a second year student and Taylor a transfer student.

Ms. Curtis, 23, a resident of Poinsett Island, graduated in 1973 from Tulane University, where she majored in biology. She worked as a laboratory technician at North American Biologicaals, Inc. in Miami before entering Nova. A native of Laurel, Miss., she is the daughter of Mr. and Mrs. John Tanner of Sarasota.

Dunckel, 27, was at the top of his class last year, also. Son of Mr. and Mrs. John L. Coleman of Harbordale, Fort Lauderdale, he attended Fort Lauderdale High School, Broward Community College, Wake Forest University and graduated from Florida Atlantic University in 1973. He worked for the Fort Lauderdale Beach Patrol as a supervisor before entering law school, and has clerked with Diguallon, Spellacy, Bernstein, Lyons and Sanders. He plans to enter general civil practice. At Nova he is organizing chairman for the Law Review and chief justice of the judicial tribunal.

Taylor, 35, is a transfer student from the University of Missouri Law School, Kansas City, where he was a night student. A native of Rockport, Mass., he graduated from Babson College, where he took his B.S. in marketing. He has worked as a college textbook editor with Holt, Rinehart and Winston and has been a trust officer of a Kansas City bank. He started a school in Puerto Plata, Dominican Republic, for students of English, Italian and French. Taylor lives in Fort Lauderdale with his wife and two children. Upon graduation he plans to practice criminal law.

Other students on the dean's list (3.0 average or better) the first semester were the following First Year Students: Fort Lauderdale residents — Karl Bontecoe, Linda Chamblis, Janet R. DeLauro, Richard L. Freedman, Bruce D. Green, Leonard W. Jenne, Mark C. Perry, William C. Redden, Jack Steil, Gary Sweet and David F. Vedder.

Hollywood residents — Mark F. Butler, Tom E. Glick, Sandy E. Karlson, Jeffrey A. Lichman and Jay S. Speckler.

Davie residents — Paul A. Lehman, Michael R. Lyon, Laurence Meyerson, Noel M. Pfeffer, James S. Purdy and Andrew Slater.

Miami residents — Nina C. Ellenbo- gen, Gary Schneider, and Michael Ullman. Coral Springs resident William E. Jones.

Hallandale resident Warren Yanoff.

Tamarac resident James Herb.

Second Year Students on the dean's list included:

Plantation residents — Lawrence J. Bohannon, William L. Gardiner, Joel Lazarus and Reggie D. Sanger.

Lauderhill residents — Elliot Bent- fest, Joseph Karsten and Frederick Pflaum.

Davie residents — Edward R. Curtis, Jack R. Loving and Mary Ellen Shoemaker.

Miami residents — Raul Delgado, Rana Epstein and Mona Fandel.

Hollywood residents — Terrence L. Labelle, and Cheri Zerlin.

(Continued on page 4)

Summer Programs Set at Law School

Nova Law School is holding a summer program June 7 through July 23, with exams completed by July 30.

Visiting and resident faculty are in­

teresting courses in Federal income tax; Criminal procedure, Florida constitu­tional law, ocean law and agency and

real estate finance.

Professors are Ronald M. Barron, an adjunct professor and partner in the firm of Barron & Lehman of Miami; William B. Jones, visiting professor from Indiana University School of Law at Indianapolis; and Nova faculty Cheryl Eisen, Barry Dubiner, Allan Lerner and Thomas E. Baynes Jr., re­spectively.

A three-hour introduction to law course for pre-law students is also offer­ed as an insight into the casebook method of instruction. While the course of­fers no law school credit, it is an opportunity to develop an ability to analyze, comprehend and express ideas. In the course Professor Joel Ber­man takes a close look at the legal system — its language, ethics and phil­osophy — and the legislative, adminis­trative and court processes through which it functions.

Seminar to Review Pensions/Profit-Sharing

Nearly every existing pension and profit-sharing plan in the country must be amended in the near future, according to Nova Law School, following IRS proce­dures, plans to help the practicing law­yer make the changes.

Nova Law School, in late-summer, will bring together in a one-day seminar at Bahia Mar Yachting Center in Fort Lauderdale a panel of speakers led off by William McClure, an attorney in the office of the chief counsel of the Internal Revenue Service in Washington, D.C.

Other speakers will include a tax law professor at Nova, tax law attorneys and a pension consultant.

Changes in the present pension and profit-sharing plans were caused by the Employee Retirement Income Security Act of 1974 (ERISA). To minimize the impact and compli­ance problems of this requirement, the Internal Revenue Service announced a "Special Reliance Procedure." This permits a set of interim rules to be relied upon as authoritative guidance on ERISA's new qualification require­ments for plan years beginning in 1974.

Therefore, the purpose of the Nova se­minar is: to introduce the lawyer, the ac­countant and the other involved parties to the Special Reliance Procedure, the re­quirement of compliance with other practical considerations in complying with ERISA.

The IRS, McClure, in his opening re­marks, will review the changes requir­ed by ERISA, the necessity to comply and the special reliance procedure.

Responsibilities of pension trustees, administrators and others and the po­tential liability will next be discussed by Nova Law Prof. Mr. Barron, who is also a partner in the Miami firm of Barron & Lehman.

Another tax practitioner, Stanley H. Kuperstein (Male, Bloom, Bodine, Friedman & Kuperstein), will give a summary plan description and deal with the practical side of applying (3030 Series of applications).

McClure will also go into the break-in service rules and cash-out rules of sec­tion 411 of the Internal Revenue Code.

Ms. Celia Falick, a pension adminis­trator and consultant (Hackett-Lied­land-Falick, Associates), will tell how to complete Department of Labor forms and plan descriptions under the proce­dure.

The last speaker, Richard S. Lehman of Barron and Lehman, will discuss what the law requires if the plan is ter­minated.

The summer pension plan seminar sponsored by Nova follows an April se­minar on Federal Rules of Evidence and a program in February on Real Estate Syndication.

Participants in the Federal Rules of Evidence seminar included: Dean Joseph M. McLaughlin of Fordham Uni­versity, Law School, Dean Emeritus Jerome Prince of Brooklyn Law School, Prof. Jeffrey L. Lewis, University of Florida Law Center, and Eugene L. Heinrich, local attorney engaged in fed­eral trial and appellate practice.

Paul F. Rothstein, Georgetown Uni­versity Law Center professor and con­sultant to the U.S. Senate Committee on Judiciary, was scheduled to appear but had to cancel at a late hour.

The evidence seminar brought attor­neys from as far as Jacksonville, the Orlando and Florida west coast areas, as well as from Dade and Broward counties.
New Law Faculty Includes Two Deans

The deans of the law schools of the University of South Carolina and the University of Toledo, and a consultant with the Watergate Special Prosecution Force, are among new faculty members of the Nova Law Center; Dean Laurance Hyde has announced.

Seven other professors will join the Nova faculty which will number 29 as the law school enters its third year. They include Larry Barnett of Gainesville, Fla.; James Brown of Kansas City, Mo.; Ronald Brown of Philadelphia; Marc Roher of Berkeley, Calif.; Marion Smith of Crawfordville, Indiana; Joseph Smith of Baltimore and Daniel Wilkes of Chevington, England.

The position is a graduate of the University of Florida School of Law and also holds a Ph.D. in sociology from Florida State University.

James Brown comes to Nova from the University of Toledo, School of Law, and a graduate of the Nova Law Center Library. He holds a J.D. degree from the Cleveland State University College of Law and an LL.M. from the Western Reserve University School of Law, St. Louis. He is the co-author of books on civil pleadings and real property and numerous articles.

Ronald Brown holds an LL.M. from Temple University School of Law, and has a J.D. from the University of Connecticut School of Law, and has taught law at Yale University.

Foster has been dean and professor of law at the University of South Carolina Law School since 1970 and will come to Nova as a visiting professor for the spring semester. He is currently dean at the University of Louisville, Western Reserve, University of Georgia and Carnegie-Mellon in Pittsburgh.

He holds an LL.M. degree from Duke University School of Law. He is the founder of Foundation Fellow at Yale University School of Law.

Karl Krastin has been dean and professor of law at the University of Toledo since 1963. He holds an LL.B. from Western Reserve University School of Law and J.S.D. from Yale Law School. From 1969 to 1963 Krastin taught law at the University of Florida

Karl Krastin has been dean and professor of law at the University of Toledo since 1963. He holds an LL.B. from Western Reserve University School of Law and J.S.D. from Yale Law School. From 1969 to 1963 Krastin taught law at the University of Florida.

Roher comes to Nova from the firm of Steinhardt, Goldberg, Penzienbaum and Lader in San Francisco, and is a graduate of Harvard Law School.

A linguist and author, Trelles is at present on leave from Nova University Center for the Study of Industrial and Fiscal Law. He is among the fourth group of three Judicial Fellows to be selected since the program began in 1971.

The Judicial Fellows Program, patterned after the White House and Congressional Fellows Programs, brings young professionals face to face with major administrative problems hindering Federal courts today. Working with top officials in judicial administration, judicial Fellows can search for, and in some cases help implement, solutions for problems handicapping the administration of justice.

"The program is directed toward attracting talented young people who will not only make a contribution during their year as Judicial Fellows, but who will go on to make a contribution to judicial modernization in future years," Chief Justice Warren Burger has stated. "Some may do this through careers in judicial planning and management, while those who pursue careers outside the judiciary can help the general public to understand the nature and needs of the judicial system."

Selected with Baynes were Larry C. Farmer, Research Associate and Instructor at Brigham Young University School of Law; and Jeffrey B. Morris, Special Assistant to the Executive Vice President for Academic Affairs and Provost of Columbia University.

This appointment is an honor and is well deserved. Professor Baynes is a fine teacher and a serious and dedicated legal scholar," says Dean Laurance M. Hyde, Jr. "His service as a Judicial Fellow will enhance the already strong background he brings to law teaching and to Nova. We look forward to his return after his leave of absence."

Baynes came to Nova from the post of Regional Director of the National Center for the State Courts located at Emory University School Law.

He received his undergraduate degree from the University of Georgia in Economics and three degrees in law from Emory and Yale universities.

He has been Assistant Dean of the School of Business at Georgia State University's School of Business and also served on its Faculty of Urban Life. He has been the author of many books and articles on state court operations and other legal matters, as well as articles on civic activities, particularly courts and their administration.

While at Nova, in addition to his teaching duties, he initiated the Nova Law Forum and directed two seminars for the legal community.

He has made his home in Tamarac with his wife Majia and their two daughters.
The retarded have a right to the basic human dignity afforded the rest of us. These are the words of Beverly Rowan, associate professor at the Nova University Center for the Study of Law, who also is legal and legislative consultant for the Joseph P. Kennedy, Jr. Foundation. Ms. Rowan, who has devoted her life since 1971 to the civil rights of the retarded, is the author of a chapter entitled "Corrections" in the book, "The Mentally Retarded and the Law," published by The Free Press, Macmillan & Co., this spring.

A cum laude graduate of the University of Miami College of Liberal Arts (A.B. 1961) and College of Law (J.D. 1967), when she was a scholarship student, she did all of her undergraduate and law school work while employed full-time as a secretary.

After receiving her J.D. degree, Ms. Rowan joined the law firm of Blackwell, Wall & Gray where she engaged in general practice and served as librarian and tax research attorney. Later she joined Muller & Mintz, attorneys where she worked as a specialist in labor law, including practice before the National Labor Relations Board. She is a member of the American, Florida and Dade County Bar Associations.

In 1971 she received a joint appointment as the first Kennedy Scholar and research professor at the UM School of Law and the Mailman Center for Child Development. Supported by funds from the Joseph P. Kennedy, Jr. Foundation, Ms. Rowan dealt with the legal aspects of mental retardation, including abortion laws as they affect mothers whose unborn children are known to be genetically abnormal; the rights of mentally retarded children in such issues as inheritance of property or funds, and their right to educational opportunities appropriate to their needs.

Professor Rowan worked on legislation and lawsuits regarding the right of the retarded with Bruce Rogow, then at the University of Miami and now at Nova, and, with Kenneth Hutchinson, research associate at the University of Miami. Their efforts have borne fruit in Florida. They helped draft the wide-sweeping "Bill of Rights for Retarded Persons" which went into effect July 1975 in Florida.

Ms. Rowan had a hand in extending abuse reporting laws to include the disabled and all ages, including those in institutions. This legislation went into effect in July 1974. She also helped push for providing limited guardianship to fit the needs of mentally retarded people. Thanks to her help 12 years of publicly-supported education for the retarded are required in Florida, and this will be extended to the severely and profoundly retarded during the 1976-77 school year.

There is a trend by legislatures across the country to make similar legislative changes. Some of this is the result of lawsuits filed by Ms. Rowan and Bruce Rogow.

After four years as a Kennedy Scholar at the University of Miami, Professor Rowan has accepted a position as director of advocacy for the Kennedy Foundation. In October of 1975, she came to Nova, where she teaches torts and family law.

Beverly Rowan has written numerous articles in her specialty area and has spoken at many conferences, both in the U.S. and abroad. She discussed "The Mentally Retarded and Crime" at the 6th International Symposium on Mental Retardation at the University of Notre Dame in August 1972. She also attended similar conferences in Bologna, Italy, and Paris, where she presented a paper on her work in France and published a column on "The Legal Status of the Mentally Retarded in the United States." In Paris, she received a standing ovation when she completed her presentation. With the work she and Bruce Rogow have done in their legal and legislative efforts, Ms. Rowan enjoys traveling — she is going around the world in junkets of about six weeks each summer — this year she covered 10 countries and heads for the Orient. A private pilot, she was formerly active in the Civil Air Patrol, Aircraft Owners a Pilots Association, Ninety-Nine and the Air Force Association.

Beverly Rowan relaxes at home with her dog, Blue, and parrot, Lola.
Policy Changes Subject To Review

Based on experience, two refinements in policy statements have been made in recent months. They are subject to further revision if subsequent experience should warrant it.

Analysis and Decision-Making Modules

Heretofore the JAR, case problem, and workshop activities have been linked informally in our thinking about their educational effect and contribution to the program. We are now putting them together for purposes of assessment and revision. Two modules have been formed: "Analysis and Decision-Making" I consists of the case problem, the first JAR, and the first National Workshop. The JAR grade is weighted at 35 per cent of the grade, and the Workshop at 20 per cent. Both must be passed. "Analysis and Decision-Making" II consists of the second JAR and the second Workshop. The JAR weight is at 35 per cent, and the Workshop at 25 per cent of the grade. Both must be passed. The modules are subject to an overall grade of 60 per cent if a student earns a grade of 2- or better for each activity. The overall grade is then weighted 50 per cent for the second JAR and 50 per cent for the workshop. A grade of 2- or better is weight at 70 per cent, while a grade of 1- or below is weighted 30 per cent.

Eligibility for Comprehensive Examination

For the Tallahassee, South Florida III and Northern Virginia Clusters the requirement for eligibility for the comprehensive examination is: Submission of all Cluster I, II, and III Examination scores for eight sequences in the credit equivalent of two sequences in the program. It provides a realistic comparison of sequence and analysis performance.

Noble Graduates 49 in Clusters

Congratulations to the following GPPA graduates:

CLUSTER PARTICIPANTS

Doctor of Public Administration

D.C. I
Don Anderson
Charles Darrow
Preston Hoyester
S.P.I
Anthony Fallon
James Fleming
Patrick Hoyester
John Vaughan
L. Douglas Yoder

Master of Public Administration

D.C. I
Don Anderson
James Baldwin
Robert Derryberry
Elbert Bush
Patricia Cuffi
Henry Cohen
Charles Cunningham
Mildred Davis
Howard Gholson
Kasimir Kay
Stanley Lefewich
Archie Morris
Presley Hoyester
Thomas Wiltine
S.P.I
Nancy Bahn
Marvelle Colby
Ambrose Fallon
James Fleming
Jack Moss
Patrick O'Connor
Julie Pagano
R. Van Elliott
James Rushing
Mira Stoddard
Henry Tal COUNT
John Vaughan
L. Douglas Yoder

Noble Elected Head Of School Administrators

William K. Noble, a graduate of the National Ed. D. Program for Educational Leaders, has been elected president of the Association of California School Administrators. He will assume the office of president of the 11,000 member organization on July 1 of this year.

Dr. Noble is principal of St. Helena High School in the Napa Valley. While a participant in the Ed. D. Program, he was involved in principal education within the state. Dr. Noble was a commission member on the Commission for the Reform of Intermediate and Secondary Education (RISE) created by state Superintendent of Public Instruction. Dr. Noble has been a principal and an emergency action guide that was approved by California state, county, and city civil defense officials in his district. Dr. Noble's doctorate degree was conferred by the Nova Trustees on July 8, 1975.

Third GPPA National Workshop Attended by Participants from 12 Clusters

The third GPPA National Workshop was held at Marina Bay and Nova University May 2-6. Participants from Pennsylvania (Delaware Valley), D.C. II, West Florida (Pensacola), Orlando, Tallahassee, Austin, Chicago, and II, Northern Virginia and Florida III, clusters I, III, and IV attended.

The workshop began with registration and introductions by Samuel A. Humes, director, and Jack Moss, chairman of the National Workshop Committee. The National Workshop was held at the Marina Bay Hotel in California. Participants included over 100 participants from various states, including Alaska, Hawaii, Oregon, Washington, and California. The workshop focused on the implementation of the National Workshop Project, which aimed to improve the quality of public administration education and training. The workshop consisted of a series of presentations, discussions, and workshops led by experts in the field of public administration. The workshop also included a panel discussion on the future of public administration education and training. The workshop was well attended, with over 100 participants from various states and countries. The workshop was a great success, and it was hoped that it would help to improve the quality of public administration education and training.
James Farquhar Reelected Chairman of State Board

James Farquhar, the founding chairman of the University's Board of Trustees and a frequently honored lead educator, has been reelected chairman of the Board of Trustees of Independent Colleges and Universities.

Farquhar has been a member of the board since 1972, having been elected to serve for appointment during the spring by the trustees and a frequently honored lead educator in bringing the board since 1971. He was renominated for the position and was reelected chairman by the trustees unanimously.

Farquhar is credited with establishing the University through difficult formative years starting in 1964 and playing a major role in bringing the institution to its present position. He stepped down as chairman a few years ago but remains one of the board's most active members.

The State Board of Independent Colleges and Universities was established by Gov. Askew in 1971 for the purpose of licensing non-public institutions of this kind in Florida. The state's principal 91 such institutions, Farquhar said recently in the board's annual report to the governor, Forty-four of these are licensed and the remaining 47 have been excluded from licensing by virtue of having been accredited by recognized accrediting agencies.

The following radio programs were broadcast on "This Is Nova University: A New Way of Learning" — 8 a.m. p.m. on WQAM (1520) Hollywood between February and mid-July, under the direction of Dr. Richard H. Bell:

"Communications" — Dr. Franklin Kilpatrick (7-21)
"New Nova at Coral Springs" — Dr. Willard Leeds
"Machine Intelligence" — Dr. Michael Pedelty
"Pediatric Screening Program" — Dr. George Reynolds

Ford Study... (Continued from page 7)

interchange, is enhanced by the fact that at least 90 per cent of the state's residents are engaged in health, education, social services, public administration, and the military. The state's educational administration is more than 50 per cent of the state's educational administration.

Joseph F. Smith, a former university professor and administrator, said that the state's educational administration is more than 50 per cent of the state's educational administration.
Dr. Abraham S. Fischler, president of Nova University, chats with participants.

Dr. Karl Siewers, a 1975 Nova graduate, principal of Blaine Elementary School in Chicago, talked with Joan E. O'Malley, participant scheduled to finish her studies in September, 1976. She is coordinator of Operations Analysis in Chicago Public Schools, Chicago 1, Educational Leaders participants.

Among those attending the Chicago Regional Meeting were Virginia Lewis (left), active cluster coordinator in Chicago, presently retired, but formerly assistant superintendent of schools, Department of Human Relations in Chicago Public Schools; and Marjorie Lerner, principal of Donaghy Elementary School and cluster coordinator in Waukegan, Illinois.

Dr. Michael W. Kirst, professor of education, Stanford University, was the guest speaker at the alumni dinner. Dr. Kirst is a member of the California State Board of Education and serves as advisor on education finance to Governor Brown.

Nova President Abraham Fischler visits with participants from the San Francisco cluster of Nova's National Ed. D. Program for Educational Leaders.

Alumni, cluster participants, and Nova officials meet before dinner gathering in the elegant Oak Room of the St. Francis Hotel in San Francisco.

Left to right, Walter McClure, a participant from the Sacramento cluster of Nova's National Ed.D. Program for Educational Leaders, talks with Dr. Fischler, Dr. Fred J. Stewart, cluster coordinator of Nova's Sacramento cluster of Nova's National Ed.D. Program for Educational Leaders; and Dr. Medill Bair, a member of the Advisory Board of Nova's National Ed.D. Program for Educational Leaders.

Left to right, Dr. Dale Tillery, a national lecturer in Nova's Ed.D. Program for Community College Faculty, from the University of California, Berkeley, meets with Dr. and Mrs. Leland L. Medsker and Dr. Donald P. Mitchell. Dr. Medsker is director of Major Applied Research Advisors for the Ed. D Program for Community College Faculty, and Dr. Mitchell is director for Nova's National Ed.D. Program for Educational Leaders.
The third annual commencement of The University School of Nova University was held June 6th at 10:30 a.m. at the Inverrary Country Club.

Guest speaker was Broward County Commissioner Jack Mous.

After receiving diplomas, each of the 23 graduates had the opportunity to come forward and speak. A brunch for graduates and their guests followed the ceremony.

All of the 1976 graduates will go on to some form of higher education — college or specialty schools, headmaster Joseph Randazzo has announced. Ninety-five percent of the students have been accepted to the college or university of their first choice.

Colleges and universities to which graduates have been accepted or wait-listed are: Arizona State, Boston University, Broward Community College, Brown, Columbia, Flagler College, Florida State, Hampden College and Harvard University.

Also, Ithaca College, Kirkland College, New College, New York University, and the Universities of Arizona, Florida, Miami, New Mexico, Southern California and South Florida, as well as Wells College, Wheaton College, and Yale University.

"With the third graduating class, the faculty of the University School is pleased to have met this goal of guiding students to pursue some of the increasing number of alternatives now available in higher education," he stated.

Students Honored With Special Awards

Awards for achievement, and improvement in various subjects, were presented to students in all three houses of the University School at an assembly June 3rd. Fifty-five awards were presented.

For the first time Director's Awards were given to those students who have made outstanding contributions to the school. Recipients were Ivy Block for academics and athletics; Nat Copenhaver III for student government, and Robert Glazier for overall contribution to the school, including his chairmanship of the Film Series.

Ms. Block, daughter of Mr. and Mrs. Richard J. Block of North Miami Beach, will enter the University of Arizona on a tennis scholarship.

Copenhaver, son of Mrs. Sallye Coolidge of Decatur, Ga., will attend Broward Community College in Cocoa, Fla. Glazier, son of Mrs. Hyvia Glazier of North Miami Beach, has chosen Columbia University.

Ivy Block Cited As Outstanding

One of The University School's outstanding graduates this year is Ivy Block. A resident of North Miami Beach, she has attended The University School since seventh grade.

Ms. Block graduated in the top fifth of her class and has been accepted as an honors student at the University of Arizona, where she will enter the School of Music, New York University Fashion Institute, Ohio State, Randolph-Macon, Rice, Kennesaw State, Sweet-Briar and Trinity.

In addition, the Universities of Arizona, Florida, Miami, New Mexico, Southern California and South Florida, as well as Wells College, Wheaton College, and Yale University.

Florida Environment Subject at Camp

Budding scientists aged 19 to 16 are being given a chance to study the South Florida environment in a summer camp setting at the University School of Nova University.

The course is being offered for four weeks under the direction of Dr. Barry Centini who holds a Ph.D. in geology from the University of North Carolina. Dr. Centini teaches chemistry and earth science every year round at the University School.

The program, one of six at the summer camp scheduled between June 21 and August 13 at the University School, is field oriented. "The main goal is to provide a program of searching—doing original studies—as compared to most science projects that are research with emphasis on Be." Dr. Centini explains. The focus is on water analysis and sampling, biological sampling, microscope work and basic water chemistry. "It is definitely not entirely lab oriented," says Centini. "I hope to have bi-weekly field collecting trips besides typical camp trips." The instructor assumes most students will bring zero scientific skills to the course, which is non-remedial.

Most students are familiar with the quantity and quality of surface water and problems of pollution, he points out. But few students are aware of the quantity of ground water or its relation to surface water.

The program will accommodate students with the Biscayne aquifer fed by Lake Okeechobee, the age of ground water, threats of salt water intrusion, etc.

Centini was a postdoctoral fellow in science education at Nova University before joining the University School faculty. Besides assisting in the sports program he is the faculty advisor for the...

Camp Conquest Offers Remedial Activities During Summer Programs

Children are learning to read by writing their own books this summer at Camp Conquest, a program for children with learning disabilities offered by The University of Nova State University.

Youngsters dictate their stories, based on field trips to the Seaguarum and other exciting places. Teachers then transcribe the stories from tapes and the children illustrate them with their own drawings. An alphabetical vocabulary list is compiled for spelling review, all pages laminated, and the "bedtime spiral bound."

"It makes it so much more interesting for the child to learn by using his own language based on his own experiences, instead of someone else's words," says Adele Anderson, director of the program. "We are teaching reading, writing and spelling — the basics, which are so important. But if you couple innovative techniques through a course called "Teaching Through The Arts" July and August at Nova University's Coral Springs Center. The course is designed to focus on self-made teaching materials for basic skills, utilizing the child's natural abilities in art, music and drama.

Using the arts as instructional tools is really nothing new, she points out: Good teachers long ago discovered that children can achieve emotional involvement which makes the learning go last and the subject stick.

"These children need a successful summer camp experience to build up their self-confidence and bolster their academic skills," says Dr. Segal, founder and director of The University School. All remedial activities are conducted on a small, personal teacher-student ratio under the direction of certified professionals. Remediation is offered in reading, math, spelling, handwriting, fine and gross motor development and perceptual training for children aged six to 12. The children also use all camp facilities at the school, including the swimming pools and field areas.

The mother of four children, Mrs. An­ derson is a former theology student who was a missionary in Alaska. She has taught in Florida and in upper New York State, and is a doctoral candidate at Nova University. She made many of the toys in the toys-to-make-at-home section of "From One To Two Years" by Dr. Marilyn Segal, published by Nova University-NYIT Press.

"I would like to encourage parents to take advantage of these new techniques, which work well with all children, not just those with learning disabilities," says Mrs. Anderson.

"For those with learning disabilities, however," she explains, "three months out of the classroom in the summer can put a child as far as six months behind."

Over 100 children are expected to attend Camp Conquest thanks to the efforts of the school, the Broward and Palm Beach County Learning Disabilities and scholarship committees.

"These children need a successful summer camp experience to build up their self-confidence and bolster their academic skills," says Dr. Segal, founder and director of The University School. All remedial activities are conducted on a small, personal teacher-student ratio under the direction of certified professional. Remediation is offered in reading, math, spelling, handwriting, fine and gross motor development and perceptual training for children aged six to 12. The children also use all camp facilities at the school, including the swimming pools and field areas.

Guide To Child's First Two Years Published

From One To Two Years, a practical guide to the toddler's development within the second year, was published by Nova-NYIT University Press, Fort Lauderdale, Florida, June 15.

The book by Dr. Marilyn Segal and Don Adcock focuses on the growing child as he begins to explore, communicate, pretend and socialize in new and interesting ways. Photographs by Bill Sarchet capture the unpredictable liveliness of one to two-year-olds and illustrate many suggestions for games and activities. A final section deals with toys to make at home.

"The book is a sequel to From Birth to One Year by Dr. Segal, who is the founding director of Nova University's Institute of Child-Centered Education. Adcock and Sarchet are graduate students at Nova. Single copies of the book are $3.50, less for quantity orders.

"The major occupation of the baby in the second year of life is exploration," Dr. Segal points out. "Busy" is probably the best single word to summarize the typical behavior of a child this age, as every parent of a toddler well knows. Whether it means his independence, express love or imagination, one to two-year-olds are constantly experimenting.

The book is divided into sections on children: 0-6 months, 6 to 12 months, 12 to 18 months, 18-21 months and 21-24 months. The authors visited 75 families from a wide range of ethnic and socio-economic groups in South Florida to gather their material.

"You will probably find that some material fits your baby, and some does not," the authors point out. "That's as it should be. You point your own baby in a way that is very special and very personal."

"Our intention is not to tell you what your baby should be like or should be doing. Our intention is to share some delightful experiences with you and to give you some of the insights that are an outgrowth of these experiences."

The following are some excerpts from the book:

12-15 Months

LOOK AT THIS — (Non verbal messages) — If the child finds an intriguing object lying around, such as a pincushion, he brings it proudly to his parents. It occurs to him that his parents will be horrified and grab the object away from him. A 12-15 month old baby does not appreciate his parents' perspective, but he does want to share his own.

VISUAL INSPECTION — The baby notices a tiny thread on the carpet or retrieves a single pea from his high chair. He may be particularly interested in looking inside a box or a wastered basket. As he goes about putting things apart, he begins to do some primitive planning to get the apple core out of the wastered basket. Each of these objectives takes a different kind of motor planning. Moving from one easier area to the next, the parent may find the baby is learning through these active explorations.

15-18 Months

SOCIAL RELATIONSHIPS — The baby is becoming more interested in the effects he can have on other people. Can he make people react to crying or yelling? Can he get people to pay attention to him by shouting, showing off or imitating their gestures? Can he make people react by pincing, poking, yelling or striking?

Possessiveness — The child's growing sense of autonomy is reflected in his attitude toward toys. He is more possessive about his toys and may hide them from siblings or other children. The child who guards his toys so protectively is trying to protect his sense of power. The toys are important symbols of the child's power and the more the toys he has at his disposal, the more he feels in control of the situation.

21-24 Months

LANGUAGE — As the two-year-old drifts off to sleep, he carries on a continuous monologue, experimenting with different arrangements of words and phrases, and playing back bits and pieces of his day's experiences. This conquest of language is the child's major accomplishment in the second year of life. It gives him the power to communicate feelings, interests and desires with other people. At the same time the child uses language to extend his immediate experiences. The more control he has over his language, the more effective he is at asserting himself and manipulating people. He discovers that words can make his mother pay attention to him, praise him and do things for him. The struggle for autonomy that has dominated his social life can now take place in the arena of language. Fighting words like, "I'm mine, I don't like it, I go away, I don't want to," replace or accompany temper tantrums.

Independence — At best the two-year-old is a long way from being really independent. Although he has learned new skills, new concepts, and new ways of controlling the people and things in the world, he is still dependent on an adult for all his major needs. The next several years will be spent mastering and perfecting the skills he already has and acquiring skills and competencies that will enable him to function in a variety of new ways. If he has lived in a physical and social environment that has fostered his curiosity and provided him a feeling of competence, he is ready to take advantage of the learning opportunities that future years will bring.

Florida Environment (Continued from page 11)

Florida students are expected to be active in the Nova Film Society.

He recently led a 10-day field excursion to the Smoky Mountains where he conducted field classes in rock climbing, mineral collecting and basic geologic mapping as well as outdoor cooking and camping.

For further information about the science program and other University School camp programs for children aged three to 16, call 385-6185.
Nova University at Coral Springs
has Quarters at Bank of Coral Springs

Nova University in Coral Springs, which was launched March 1 with 58 students, is now established in its new quarters at 3300 University Drive.

The accommodations on the second floor of the new Bank of Coral Springs building total 4,300 feet and include eight classrooms, an office suite and use of a 206-seat community auditorium. The quarters have been made available by Coral Ridge Properties.

Dr. William L. Leads, director, anticipates a modest summer enrollment, but an expansion to well over 100 students in September.

“We are very much a community-oriented campus and want to offer what is needed here,” says Dr. Leads.

So far, business and special company-related subjects have proved the most popular offerings, with over 20 students enrolled in a course on microcomputers taught by Jerry King of Nova's Biotech Laboratory.

A house is planned for the early fall and announcement of the expansion of course offerings soon after.

For information about programs at Nova's new campus call 733-3300.

Nine New Majors Offered By College

Nova College, which now has over 400 students, is offering nine new majors, Ms. Debbi Glass, director, has announced. Included are: Communications (with options in advertising, journalism, mass communications or public relations), computer technology, life sciences, public and community services, political science, and economics.

This makes a total of 19 majors.

“The B.S. degree used to be granted by the New York Institute of Technology and now is granted by Nova University,” she points out. “However, the college is still part of the consortium between Nova and NYIT and draws on NYIT's facilities and faculty. Nova College's advisory committee is made up of heads of departments from both Nova University and NYIT.

Also participating in the Nova University's new campus is Dr. Abraham Zeytoonian, 28-year-old computer expert who is now teaching "Othello," says the 28-year-old professor.

The student reaction to the program has been very positive. Commented one lady: "At my age (28) I have had many highlights in my life. I can definitely say the instructor has made this class rank high on the list of highlights."

The program itself is well structured. One hundred twenty credits are required for the Bachelor's Degree in education. Up to 60 credits will be accepted from other colleges and 60 credits from the Life Experience Program in education is permitted for eight weeks.

Enrollment is made up of students from all areas of the business and professional world who attend class evenings and Saturdays. Classes are offered year round with six accelerated eight-week terms. Among them are many police officers pursuing their B.S. degree in criminal justice who wind up in a humanities class taught by Ms. Glass.

"It's fun to see them getting excited about college," says the 28-year-old law teacher who took her masters degree in humanities with honors from Florida State in 1971. Since 1973, she has risen from adjunct professor to assistant to the registrar to academic coordinator to director of Nova College. She is presently working on her Ed.D. in higher education administration.

"Approximately seventy percent of Nova College students go on to graduate school," Ms. Glass points out. The majority are in business administration and behavioral sciences.

Faculty members of Nova College are warmly appreciated by their students, Ms. Glass states. Among them are Nova Ph.D. students Randy Wood and Larry Michelson, who team teach a class in social psychology; Charles Maddox, Dade County expert on collective bargaining and labor relations; Mike Farney, who has been known to call up students and offer extra help to those he feels are having trouble with math, and Stuart Horn, who bravely wades a pony tail while lecturing on religion and the quality of life.

"We are planning several new courses in the fall," says Ms. Glass, "including courses on such topics as death, women's studies and existential psychology.

"The major purpose of the Nova College program is to develop course content and delivery systems designed to meet the special needs of those candi-

B.S. in Education Program Underway

“I always dreamed of becoming a teacher but thought it was too late for my dream ever to come true. Until I heard of Nova's new program.”

This statement is expressed many times when students register for Nova University's Bachelor of Science in Education program.

The program is designed specifically for people who have had experience with groups of children and who know that they are well-suited to be teachers, but who have either never obtained a college degree or did not take the coursework needed to obtain a teacher certificate.

Dr. Anna Mae Walsh Burke, designer and director of the program, had initially projected an enrollment of 40 students. The program opened this spring, however, with 80 students, and in two months has over 100 enrolled. A number of people connected with educators in the Community have expressed to Dr. Burke their feeling that the program is a community service.

Many of the people in the program are now teaching aides and teaching assistants with the County school system, and bring a number of years of valuable experience to classroom discussions. In turn, they are putting the knowledge they are obtaining in the Saturday classes to use in their daily work.

The faculty for the program is drawn from among the top educators of the community, some from the University faculty. Others are qualified educators from the County school system, and still others hold faculty appointments at other academic institutions. Each combines real world expertise with scholarly knowledge.

The student reaction to the program has been very positive. Commented one lady: “At my age (24) I have had many highlights in my life. I can definitively say the instructor has made this class rank high on the list of highlights.”

The program itself is well structured. One hundred twenty credits are required for the Bachelor’s Degree in Education. Up to 60 credits will be accepted from other programs and 60 credits from the Life Experience Program in education is permitted for 8 weeks.

"We are planning several new courses in the fall," says Ms. Glass, "including courses on such topics as death, women's studies and existential psychology.

"The major purpose of the Nova College program is to develop course content and delivery systems designed to meet the special needs of those candidates who are seeking a quality education but who cannot participate in a conventional college program," says Dr. Alexander Schur, chancellor of Nova University and president of NYIT.

For information about programs at Nova's new campus call 733-3300.

$500 ANNUAL CORAL SPRINGS SCHOLARSHIP: for residents attending the new campus at Coral Springs has been donated by Carl Zeytoonian, right, to Nova University. Dr. Abraham S. Phillips, left, Nova University's new executive vice president.
Rosemary Jones, director of Public Affairs, had a book review of The Chil-
dren of Promise by Ruth B. Rothchild and Susan Wells in the Miami Herald Viewpoint section April 18. She is teaching a course in creative writing through adult education at Fort Lauderdale and Nova-Davie Com-
munity School.

John Kelly of the University School of Law, was teaching a course at Nova-Davie Community School, Thursdays from 7 to 10 p.m.

On May 23, he was en-
terprise an associate at the Center for Effective Living in Fort Lauderdale, where he carries parent-
ing groups and does individual, mar-
rriage and family counseling.

On April 25, Dr. Segal did a workshop at Camp Challenge for the Florida Youth Council. On April 30, he gave a workshop in "Groun-
d Water Dating" at a seminar at the University of Miami’s Chemistry Depart-
ment.

Dr. Murry Tamers, associate profes-
sor of physical Chemistry, established a clear-
ing house for information about available training and professional de-
velopment opportunities for public school and other government and community service agen-
cies.

In their recommendations stemming from the workshop, they have empha-
sized that young people who commit misdemeanors should be moved out of the juvenile justice system and toward programs starting with the family, schools, citi-
zens and police.

Another aim is to study the scattering of the subsequent propagation of energy in the boundary layer above the bottom. The re-
ductive movies of sediment ripples in this layer by bottom currents. The plaintiff is not imprisoned upon expec-
tation for several months. The program mission is to improve the quality of government by helping of-

The program will be directed toward the implementation of a new masters level program in public management, which will include a series of profes-
sional development units which may be taken as a whole for a masters degree or individually to meet the specific needs of individuals of government agencies.

The purpose of the program is to de-
velop partnerships with a number of participants as generalist administra-
tors, or specialist professionals through a state and community service agen-
cies.

Talk with your children about how they should conduct themselves in the pool — what they should and should not do. This can be done before arrival while they are riding in the car.

Do not assume that the pool will have a lifeguard — most do not. Find out when you register.

Regardless of how well your children swim, go with them to the pool to determine what warnings exist and whether there is special equipment, such as water slides and springboards, with which your youngsters might not be familiar. You should also make certain there is a lifeguard separating the deep water from the shallow water, and that there are no hidden water ledges that the youngsters might strike.

Determine if there is adult supervision present. If no one is in the pool and there is no lifeguard on duty, stay at the pool and supervise your children.

Do not let them horse around in the pool — push each other in, dive in shallow water, run around pool or play on the springboard.

If the pool has a water slide, you should restrict your children to only going down in the sitting position, unless the slide is located in water 6 feet deep.

Do not let your children swim at night unless there is adequate illumination.

Under no circumstances should they "speak into the pool for a swim."

Dr. Gabrielsen strongly believes that cities and states need strict regulations governing both the design and operation of motel and hotel pools. He suggests the possible inclusion in these regulations of apartment and condominium pools since many guests use those pools.

The greatest deficiency in present pool regulations, he feels, is "the failure to require proper supervision by qualified personnel."

He says his investigations have shown that the average smallest room charge (25 cents for a 200-unit facility) motels should provide lifeguards which would "dramatically reduce the accident rate."

### Betty Pitts Receives Scholarship Grant

Mrs. Betty P. Pitts, a resident of Pompano Beach and student at Nova College, was recently awarded a $600 scholarship grant by the National Society of Public Accountants Scholarship Foundation. She is working toward the completion of her B.S. degree in business, specializing in accounting.

Originally from Savannah, Ga., Mrs. Pitts has taken courses at several universities, including the University of Virginia where she "achieved her best average to date." She is working toward an A.B. degree.

### Mike Twist

**FORERER TEACHER EARNS PH. D.**

E. Michael Twist, a Pompano High School graduate who was among the first students at Florida Atlantic University, is the first candidate to earn his Doctorate in Biology from this university. He took his degree in biology with emphasis in microbiology. His doctoral thesis dealt with the role of herpes virus type (oral) in human primary lung cancer.

Twist has accepted a postdoctoral fellowship at the Institute for Cancer Research in Philadelphia where he will do research on the nuclear acids of cancer viruses.
Firstly, some significant improvement may be achieved, however, through the $34 million road construction bond issue authorized by the county, synchronization of traffic signals, and the 30 new buses expected this year.

Keller cautioned, however, that mass transit is not likely to ever relieve the burden on the highways; about 90 percent of the system will always consist of roads.

By 1980, he said, mass transit will be carrying 250,000 passengers a day, "but that still will be only seven percent of the total trips being taken in the county."

Stunson warned the municipal officials that the new city charter will present some problems to them, and cautioned them to "look out for" these situations:

- The County Commission's expressed desire to own and operate all water treatment plants; stringent quality control regulations on water discharge, the county's inclination to extend its land use powers in ways that would deprive cities of some of their authority, and the county's ability to set up special taxing districts for various purposes.

Stunson said he does not advocate sale of disposal, it is also "questionable," Kein said.

On the other hand, to build a recycling plant would "be a long way to go," Stunson warned the municipal officials.

Kain also listed water treatment, sewage disposal, transportation, crime prevention and collective bargaining as knotty problems.

As to water, he said, "We're not running out of water. We're just running out of water that's easy to dispose of; it is also "questionable," Kein said.
